

## **Annexure- I      Safety Measures for Volunteers against Covid - 19**

### **FLOW OF VOLUNTEERS CHECK AT SCREENING VISIT**

Check the body temperature of each volunteer with use of Infrared Thermometer at Entry gate prior to entering the premises.

Prior to entry into screening area, the normal healthy Volunteers will be instructed to wash and clean their hands with sanitizer (soap and water as alternative).

Volunteers with high body temp. will be checked by screening physician for verification and opinion. Any such volunteer will not be allowed to enter in premise and counselled to consult local physician.

During screening clinical examination, if any volunteer found with primary symptoms of fever, cold & cough, sore throat, fatigue etc. or relevant medical history or recent history of travelling to infected place or in contact with infected people will not be enrolled further.

Any such volunteer will be considered as unfit for screening and will be counselled and advised to consult local physician/Govt. hospital for further reference.

### **FLOW OF VOLUNTEERS CHECK AT CHECK-IN VISIT**

Check the body temperature of each subject with use of Infrared Thermometer at Entry gate prior to entering the premises.

Prior to entry into check-in area, the normal healthy subjects will be instructed to wash and clean their hands with sanitizer (soap and water as alternative).

If the subject is found with high body temp, subject will be checked by Investigator/designated physician for verification and a detailed examination will be carried out.

During check-in clinical examination, if any subject found with primary symptoms of fever, cold & cough, sore throat, fatigue etc. or relevant medical history, it will be considered as AE and will be documented.

Any such subject will be isolated from other subjects. The clinical condition of the subject will be evaluated by Investigator/designated physician in consultation with safety committee for management of event. The subject would be treated appropriately and advised to consult local physician/Govt. Hospital for further reference and management of event.

All normal healthy subjects will be instructed again to wash and clean their hands with sanitizer (soap and water as alternative) prior to entry into clinic.
